SERVICE DETAILS

Loss Analysis: Turn your loss runs into useful information to identify accident trends and help identify corrective action to prevent occurrence of claims.

Mid-Term Experience Modification Promulgation: Your workers' compensation experience mod is determined about 6 months prior to your renewal. We review your pertinent payroll and loss information and perform a promulgation to forecast your mod so that there are fewer surprises. We can help you identify action to take on open claims to try to reduce that mod before it's set in stone for the next year.

"Risk in Focus": "Risk in Focus" is a quarterly publication that provides tips on preventing losses and managing risk for businesses of all types. Also included are safety meeting tip sheets that can be used to conduct safety meetings with your employees.

Safety Program and Drug Free Workplace Programs: These basic programs can help your organization receive the 5% Drug Free Workplace Program credit and 2% Safety Credit. These programs offer the basic foundations for a safe workplace and meet the requirements to receive the discounts.

Customized Safety Programs, OSHA and DOT compliance programs: Having a sample document does not necessarily make you compliant. This service is the assessment, development and customization of the required written programs that may be applicable to the hazards of your business. These programs are customized to your specific operations to assist you in compliance with OSHA and DOT regulations and in preventing losses.

On-Site Safety and Risk Management Services: These services consist of full day on-site safety and risk management consultations. Consultations consist of facility and job-site safety inspections, training for employees and supervisors, safety policy and program review, and development of written recommendations and action plans. These services can include industrial hygiene services such as noise sampling and ergonomic evaluations.
